CYBER KNIGHTS ENTERPRISE CORP - INFOSEC POLICY

VERSION 3.0 (ACTIVE) | EFFECTIVE: JAN 1, 2025 | EXPIRES: ACTIVE / INDEFINITE

SECTION 1: REMOTE NETWORK ACCESS

1.1 All remote connections require Zero Trust Network Access (ZTNA) with continuous device posture checks.

1.2 Maximum idle session timeout is 30 minutes. Re-authentication is enforced at every connection resumption.

SECTION 2: PASSWORD AND AUTHENTICATION STANDARDS

2.1 Traditional passwords are deprecated in favor of FIDO2 WebAuthn hardware keys (YubiKey 5 Series).

2.2 For fallback systems requiring passphrases, minimum length is 16 characters with no periodic rotation required.

2.3 SMS-based 2FA is strictly banned due to SIM-swapping and interception vulnerabilities. Only FIDO2 hardware keys or push verification are allowed.

SECTION 3: HARDWARE AND DEVICE MANAGEMENT

3.1 BYOD personal devices are 100% prohibited across all departments without exception.

3.2 Only company hardware with CrowdStrike Falcon EDR, TPM 2.0, and remote wipe capabilities may access company assets.

SECTION 4: DATA TRANSFER AND ARTIFICIAL INTELLIGENCE USAGE

4.1 USB storage ports remain permanently disabled at the hardware BIOS level.

4.2 Corporate AI Policy: Employees may only use internal offline document intelligence systems (such as RAGNext with local Ollama inference). Uploading internal company code, documents, or customer PII to public cloud AI tools (ChatGPT, Claude) is classified as a Critical Security Violation.
